

Base Interruptible Program

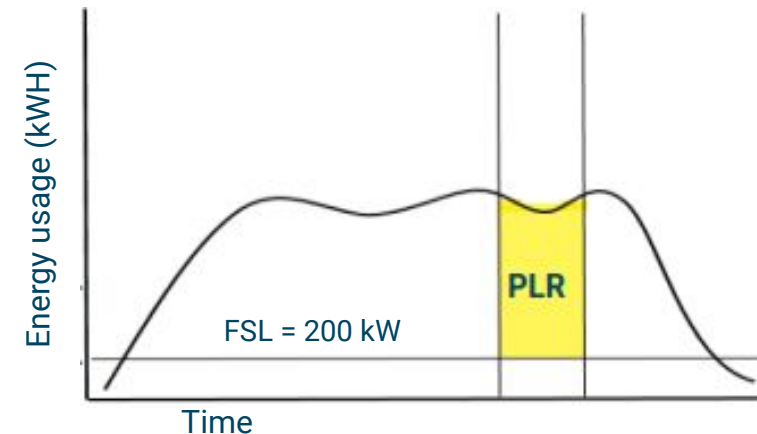

- BIP participants are on standby **24/7/365** to provide **day-of-load reduction** when the utility or CAISO issues a curtailment notice
- Participants designate a Firm Service Level (FSL), a maximum level of demand that they can operate at during a curtailment event
- When events are called, participants are given a **15, 20, or 30 minute notice** (depending on IOU and product option) to reduce their load down to or below their FSL

Base Interruptible Program

- Monthly incentives based on **potential load reduction (average demand – firm service level)** during qualifying time-of-use hours, multiplied by a monthly incentive rate (varies by IOU)
- Receive monthly payments for potential load reduction, even if no curtailment events are called
- Pay an excess energy charge for usage above Firm Service Level during a curtailment event
